

SES Consultants, Inc.

Presents

A GALAXY OF SOLUTIONS

SES Consultants, Inc. works with contemporary and commercial space technology and system developers, military and civil government agencies, and academia to:

- * *Create visionary solutions to establish or strengthen our customers' leadership positions in the space community*
- * *Expedite space technology development into production while reducing risk*
- * *Identify insertion opportunities and customers for new space technology products*
- * *Assemble and guide expert teams in developing proposals, roadmaps, technologies, and products*
- * *Perform radiation effects test planning and analysis*
- * *Develop corporate export control and ITAR compliance policies and training programs*
- * *Locate technology development funding and assess potential risks and pay-offs*

SES Consultants, Inc. creates effective, competitive space technology and product portfolios and roadmaps. We facilitate the flow of concepts, technologies, and products to domestic and global space markets. We specialize in the development of robust, radiation hardened, high performance computing electronics solutions for spacecraft and missile applications.

Each consultant has more than 20 years of experience with expertise in radiation effects, semiconductor physics, business management, proposal generation, strategic planning, and management of space technology development from basic research to product qualification.

Discover how we can propel your success to the sky!
